

Transmission Line Supports

Cable Ladder Attachment Kits

Trylon offers several backing clip assemblies that allow the cable ladder to be securely mounted to angle or round members of various sizes (see size information in the below price tables).

One attachment kit per 10' section is recommended as a minimum requirement. However, more attachments may be required for heavier loading situations. Call us to see if your site requires more than the minimum number of attachments kits.

All material is hot dip galvanized after fabrication.

Quick Guide

Size	Four versions for various applications	Mounts to	Angle or round tower members
Design	Attach cable ladder to tower members	Material	Hot dip galvanized steel
Feature	Fits a wide range of member sizes	Order Separately	Cable Ladder

Kit #	Description	Qty	List Price	Wt
Small Clip Assemblies				
5.939.0005.002	Small Angle Clip Kit for angle members up to 4" in size*, or round members up to 4½" OD	Ea	\$15	1.3
5.939.0005.004	Small Universal Clip Kit for angle members up to 4" to 8" in size*	Ea	\$23	1.7
Large Clip Assemblies				
5.939.0005.012	Large Angle Clip Kit for angle members up to 4" in size*	Ea	\$38	2.9
5.939.0005.014	Large Universal Clip Kit for angle members up to 4" to 8" in size*, or round members up to 6" OD	Ea	\$48	3.9

* Except for our 4" cable rail option, then the small clip fits up to 3½" angles.

Cable Ladder Extension Bracket

This unique attachment bracket extends transmission line capacity by mounting directly to existing Trylon cable ladder rungs. The support bracket can mount up to an additional ten ¾" snap-in hangers or thirteen 7/16" butterfly hangers. However, for installation, two ¾" holes on the existing ladder rungs will be required for mounting the extension bracket.

All material is hot dip galvanized for corrosion resistance in any environmental condition.

Transmission Line Supports

Cable Ladder Assemblies continued

These new Cable Ladders have twice as many standard backing assemblies for added strength, durability and security in high wind regions.

The 10' sections are available with 2 backing assemblies, whereas the 20' sections are available with 4 backing assemblies. Both lengths are also available with 4' or 3' centered rungs to better match site conditions.

All material is hot dip galvanized to weather the elements.

(Note: See page 43 of our standard catalogue for correct backing assembly to tower member size.)

Transmission Line Supports

Cable Trays

Cable Trays provide support and protection of transmission lines in roof top applications. Their main benefit over traditional roof top coax bridges is that no additional hardware, such as hangers or brackets, are required for transmission line installation as they simply lay inside the tray for routing.

The trays are available in four widths (6", 8", 12", and 18"), and come standard in a 4" deep by 8' long galvanized sheet. Splice hardware and matching screw-down covers are also available and kitted for your purchasing needs.

Kit #	Description	Qty	List Price	Wt

Transmission Line Supports

Roof Top Coax Bridge Kits

Trylon's Roof Top Coax Bridge Kits are ideal for non-penetrating installations of transmission lines. The galvanized 11ga covers along with three UV-resistant 4" PVC sleepers are available in three widths (4-run, 8-run and 12-run) and come standard in 8' lengths.

The PVC sleepers support the tx lines horizontally on 32" centers while the 3/4" holes for snap-in hangers are spaced far enough to fit large LDF12 (2 1/4") lines.

All hardware included.

Quick Guide

Size	8' long	Mounts to	Non-penetrating design

5.939.0070.012	12-Run Roof Top Coax Bridge Kit	Ea	\$852	184

Wall Coax Support Kits

Trylon's Wall Coax Support Kits are the perfect solution for wall mounting transmission lines. The galvanized 11ga covers are available in three widths (4-run, 8-run and 12-run). These 8' long covers easily attach to the two wall brackets using the pre-kitted self-drilling screws.

The galvanized wall brackets have 3/4" holes spaced to fit large LDF12 (2 1/4") transmission lines utilizing standard snap-in hangers (supplied by others).

All hardware included except wall mounting anchors.

Transmission Line Supports

T-Style Transmission Line Brackets

Trylon's T-Style Transmission Line Brackets were specifically designed to mount directly to any type or sized tower leg. Three sizes are available covering numerous leg options. These brackets may be attached to pipes up to 11" OD, or angles up to 8" (60° or 90°) in size.

The three sizes (small, medium and large) are available in three versions to match your specific line requirements. The shortest option can accommodate 8 runs of 3/4" snap-in hangers or 7/16" butterfly hangers, the middle version can handle 16 runs, whereas the longest option offers 24 runs.

These brackets provide unique flexibility for your changing needs and can be installed either inside or outside the tower leg to avoid nagging obstacles such as tower bracing, leg flanges, or splices.

All steel is hot dip galvanized to withstand the elements.

(Note, these brackets are designed to hold LDF12 lines under 120mph winds when installed on 4' centers.)

Transmission Line Supports

Boomerang Transmission Line Brackets

Trylon's Boomerang Transmission Line Brackets are a unique combination of the T-Style Bracket and Face Mounted Cable Ladder assembly. It is specially fitted to mount to triangular towers, and directly to the tower leg (like the T-Style), with the transmission lines installed on the outside of the tower face (like the cable ladder). This bracket provides superior flexibility to meet your new or existing tower's needs.

The three sizes (small, medium, and large) come in two options: 1) the shorter option, which can accommodate 16 runs of 3/4" snap-ins or 7/16" butterfly hangers, or 2) the longer option, which offers 24 runs of 3/4" or 7/16" holes.

(Note, these brackets are designed to hold LDF12 lines under 120mph winds when installed on 4' centers.)

All steel is hot dip galvanized to weather the harsh environment.

Triple Cantilever Waveguide Bridge

Triple Cantilever Waveguide Bridges are ideal when there is limited space between tower structures and buildings (typically in the 6' to 8' separation range).

The kit comes complete with three 18" x 5' solid covers and all hardware needed to attach to all-weld tower structures with face widths ranging from 24" to 48", and tower leg sizes up to 3½" OD.

Optional kits include (a) six 18" 2-rung trapeze kits, which have a maximum capacity of (60) 3/4" or (72) 7/16" holes for transmission lines; or (b) a 60" end shield that provides an additional 18" of protection beyond the current 5' covers.

All material is hot dip galvanized to weather the elements.

Transmission Line Supports

Waveguide Bridge Components

WAVEGUIDE BRIDGE COVERS

Waveguide Bridge Covers can support horizontal runs of transmission lines. They come standard in either 5' or 10' lengths and are offered in three widths (12", 18", and 24"). All open-serrated diamond-shaped grating are made from 12-gauge steel. Whereas all pre-punch solid channel covers are made from 11-gauge steel material.

UNIVERSAL SPLICE

The Universal Splice fits all three cover widths (12", 18", and 24"); it allows connection of either solid or open grating waveguide bridges to increase section length. Supports are recommended within 2½' of the splice. All hardware is included for installation, and all material is hot dip galvanized.

POST ASSEMBLIES

The post assemblies are offered in two styles, direct burial and base shoe, to meet your site-specific requirements.

The direct burial post is available as either a 3½" OD x 14' long or 4½" OD x 14' long pipe with a pipe head cover. Both options require a minimum of 3½' embedment into concrete for a secure footing.

The base shoe post is available as either a 3½" OD x 10½' long pipe or 4½" OD x 10½' long pipe, both with a pipe head and four 1/2" x 18" long wedge anchors.

All post options allow height adjustments up to 10' for the waveguide bridge cover. All material is hot dip galvanized.

Transmission Line Supports

Cable Ladders

Trylon's cable ladders can be either your light duty or heavy duty waveguide ladder of choice. It's foldable for easy rigging and installation and available in 10' and 20' lengths. It can be installed to any tower structure or attachment span.

The support rungs are offered in four sizes and can accommodate 3/4" snap-in hangers or 7/16" butterfly hangers. The holes are spaced to fit large LDF12 lines, while our 12-hole ladder options are available in both 4' and 3' centers for those areas where site conditions require extra support or heavy line loading.

All material is hot dip galvanized to weather the elements.

See page 43 for mating the correct backing hardware with these ladder assemblies

W/G BRACE SUPPORTS

The waveguide bridge supports provide connection between the posts and covers. The assemblies are designed to work with both solid and open grated covers, and are offered in three single sided, three double sided and three canopy style options.

They have the versatility to field adjust the waveguide bridge assembly to any required height using the 1/2" u-bolt hardware, along with the option to attach to either 3 1/2" or 4 1/2" OD posts depending on the kit purchased.

All material is hot dip galvanized.

TRAPEZE KITS

The Trapeze Kits are offered in three styles: standard 3-rung trapezes for open-grated covers, 2-rung trapezes for solid covers, and 1- or 2-rung z-trapezes for open-grated covers. Each style has its own unique advantage and is offered in three widths (12", 18", and 24") mated to our covers.

All trapezes come standard with both 3/4" snap-in holes and 7/16" butterfly hanger holes for installation of transmission

lines. The quantity of holes depends on the style and option of trapeze purchased, but can be review in the Trapeze Line Quantity Table on the following page or in the below price tables.

All hardware is included for installation. All threaded rods are stainless steel and all trapezes are hot dip galvanized to weather the elements.

Transmission Line Supports

Waveguide Bridge Components *continued*

W/G SHIELD ASSEMBLY

The W/G Shield Assembly offers additional transmission line protection at the end of a waveguide bridge where lines often flare out beyond the sides. The assembly is capable of connecting a range of waveguide bridges offered by Trylon, including all single and double options, and solid or open grated covers. It is recommended that supports be placed within 1' of the shield. All hardware is included for installation, and all material is hot dip galvanized.

5.939.0190.100	100" W/G Shield Assembly	Ea	\$219	86

ADJUSTABLE SPLICE

The versatile Adjustable Splice can connect two sections of waveguide bridge, ranging from 12" to 24" in size. They can be either solid or grated, and connect at bends from 0° to 45°. If larger angles are required, additional splices can be used together. It is recommended that supports be placed within 2' of the splice. All hardware is included for installation, and all material is hot dip galvanized. Some field drilling may be required.
