

- .. CSA S37-13 compliant
- .. Up to 190' Self-Support Tower
- .. Standard 10' sections
- .. Tower legs are 60° angle. Bracing is 90° angle on a diagonal pattern (no horizontals)
- .. All members are hot-dip galvanized throughout to provide years of trouble free service

Explanation of CSA Class 1 vs Class 3 Wind Loading

- .. The following pages contain wind loading specifications for each tower model. The wind load capacity is expressed as the “maximum allowable antenna area” that can be placed at the tower top, based on a specific wind pressure.
- .. The term “antenna area” refers to the surface area of the antenna that’s exposed to wind.
- .. For example, a flat panel antenna will have a projected surface area roughly equivalent to the Length x Width of the largest surface. In the example pictured on the right, the projected surface area would equal, Length (2') x Width (1') = 2'.
- .. The pages also provide allowable antenna areas based upon CSA Class 1, and CSA Class 3. The Class 3 design offers greater strength capacity for each tower.
- .. A simple guide line for interpreting when a tower installation would be considered Class 1 or Class 3 is shown in the table below.

Reliability Class	Importance Factor	Classification Criteria
1	1.0	Failure would result in risk of injury or unacceptable disruption of service.
2	0.9	Failure would result in negligible risk of injury. Loss of service is not critical.
3	0.8	All consequences of failure are tolerable. No foreseeable risk of injury.

Includes anchor material for concrete foundation, splice hardware, and pipe anchor brackets for antenna mounting pipe (pipe sold separately on page 70). Models S100 to H110 use a 5' embedment section as the anchor for concrete; models S300 to S410 use base feet and tie-rods for concrete foundation. Knocked-down towers reduce shipping cost in comparison with pre-assembled.

Due to the weight, towers on this page are not available in pre-assembled 10' sections. They ship in "knock-down" format and require field assembly by experienced, professional, tower installers. Trylon Distributors will stock individual 10', knock-down sections, therefore customers may choose to order towers by the section (see pages 58 and 59), rather than a complete tower kit. Ordering by section also facilitates choosing a different foundation/anchorage system versus the anchor bolts and base feet supplied in kit format. For example, to order the 130' S300, one can use the kit number 5.94.0300.130. Alternatively, one could order sections #3 Top, #4, #5, etc. Models S300 to S600 include all 10' sections, base feet and tie-rods, splice hardware, and angle frame brackets to support a top antenna mounting pipe (pipe sold separately on page 70).

Due to the weight, towers on this page are not available in pre-assembled 10' sections. They ship in "knock-down" format and require field assembly by experienced, professional, tower installers. Trylon Distributors will stock individual 10' knock-down sections, therefore customers may choose to order towers by the section (see pages 58 and 59), rather than a complete tower kit. Ordering by section also facilitates choosing a different foundation/anchorage system versus the anchor bolts and base feet supplied in kit format. For example, to order the 140' S300, one can use the kit number 5.94.0300.140. Alternatively, one could order sections #3 Top, #4, #5, etc. Models S610 to S810 include all 10' sections, base feet and tie-rods, splice hardware, and angle frame brackets to support a top antenna mounting pipe (pipe sold separately on page 70).

SUPER TITAN KD

Diagram illustrating the cross-section of a pier and beam foundation system. The system consists of three square piers, each 30" ϕ or Square Piers, spaced apart. Each pier contains 12 #6 Bars/Pier and is tied with #4 Ties on 10" c/c. The piers are supported by a base of Insulating Styrofoam (See Notes). The base is reinforced with #6 on 12" c/c - both ways. The overall dimensions are 5'-0" Deep and A x A Square. The spacing between piers is 1'-0" and the base thickness is 1'-9".

NOTES:

FOUNDATION NOTES:

GENERAL:

- 1) ALL WORKMANSHIP AND MATERIALS SHALL BE IN ACCORDANCE WITH APPLICABLE LOCAL STANDARDS.
- 2) FOUNDATIONS DESIGNED FOR NORMAL DRY SOIL CONDITIONS
- 3) THE TOWER BASE PAD SHALL BE PLACED AGAINST UNDISTURBED SOIL.

CONCRETE:

- 1) CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH AT 28 DAYS OF NOT LESS THAN 4000 psi.
- 2) CONCRETE SHALL CONTAIN AN AIR ENTRAINING AGENT.
- 3) THE MAXIMUM SIZE OF COARSE AGGREGATE SHALL BE 3/4 in. SLUMP SHALL BE 3 in +/- 1 in
- 4) ALL GROUT SHALL BE NON-FERROUS AND NON SHRINK WITH A MINIMUM COMPRESSIVE STRENGTH OF 5000 psi AT 28 DAYS, EDGES GROUT SHALL BE TAPERED OFF AT 45°.

REINFORCEMENT:

- 1) ALL REINFORCEMENT SHALL HAVE A MINIMUM OF 3 in CONCRETE COVER.
- 2) REINFORCING STEEL SHALL BE DEFORMED BARS WITH A MINIMUM YIELD OF 60 ksi.

BACKFILLING:

- 1) EXCAVATED MATERIAL SHALL BE PLACED IN THIN LIFTS (MAXIMUM 6 in) AND COMPACTED TO A MINIMUM OF 95 PERCENT OF STANDARD PROCTOR MAXIMUM DRY DENSITY. IN THE EVENT THAT EXCAVATED MATERIALS ARE NOT SUITABLE FOR BACKFILL, IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO SUPPLY AND COMPACT SUITABLE CLEAN MATERIAL TO MEET THAT REQUIREMENT.

INSULATION:

- 1) WHERE FROST PENETRATION DEPTHS EXCEED 6 ft, PLACE INSULATING STYROFOAM ON SLAB EXTENDING 3 ft PAST THE EDGE OF THE SLAB. HIGHLOAD 40 INSULATION BY DOW CHEMICALS IS RECOMMENDED.

This image shows a full page of blank, lined paper. It features approximately 28 evenly spaced horizontal grey lines across its entire width. The lines are thin and consistent in color, providing a clean template for writing or drawing. There are no margins, text, or other markings present on the page.
